

DIGITAL HISTORY

In this project our aim is to learn our history, use digital tools and introduce to others. We will both learn and have fun with school trips to historical places. Collaborating with European schools we will develop innovative practices using informatics. We will present outcomes both on Twinspace and at school.

Our aim is to provide students to learn both their and other's history. The students will gain awareness of history and share information with partner schools. The students will improve their skills in foreign language. Both students and teachers will be able to use technology beneficially.

The project will start in October and will take five months. Partners will exchange ideas on social media and twinspace. Project tasks will be decided and shared by partner schools.

During the project, the students will be aware of the history of both their country and the partner's. Teachers and students will cooperate to create the pages and tasks. This will help the realization of active learning in every step of the project. The students will gain self-confidence both in communication and collaboration with others.

In this project there are 13 partners. 3 partners from Romania, 4 partners from Italy, 1 partner from Moldova and 5 partners from Türkiye. From Sema Yazar Anatolian High School we are 5 partners; the founder Özlem Gençtürk, Muammer Özbebit, Fatih Kılıç, Ayfer Genç Tuna and Bilal Sarıca.
